

The County Council secured £15m of Government funding last year to make better broadband services available in the county, which we have pledged to match, and we are now looking for a private sector partner to install the infrastructure and to invest in the project.

To get the best possible partner for the project, we need to show how much demand there is for better broadband services in Norfolk. Over 1500 people have already registered their support, since the launch on Wednesday 11 January.

Can you and your school help spread the word about the campaign? Please mention our campaign in any school communications, and don't forget to sign your school up too.
