

Mathematics: Reaching the Expected Standard and Beyond at KS2

Join us to explore the things you can do in your classroom to make your pupils better mathematicians, with the help of nationally renowned mathematics expert Craig Barton and the Educator Solutions Maths Team.

This budget-friendly, innovative seminar and workshop format will enable you to not only hear from Craig Barton (author of the best-selling 'How I Wish I'd Taught Maths'), but also select from one of three focused workshops, allowing you to follow and work towards your school's chosen priorities.

In his seminar, Craig will share how he has harnessed evidence-informed approaches to transform his teaching and make his pupils better mathematicians. He will delve into exactly what his practice now looks like, why he made key strategic decisions and how critics have responded to his choices.

Workshop 1: Raising Attainment in Mathematics

Reflect on the 2018 KS2 Mathematics test, have the myths dispelled and be focused on the facts, so you can better prepare your pupils for the 2019 tests and beyond.

Workshop 2: Understanding fractions and mixed numbers

Ensure your KS2 pupils fully grasp fractions and mixed numbers by exploring pedagogy designed to develop pupils' conceptual and procedural knowledge.

Workshop 3: Developing times tables fluency

Explore teaching ideas and fluency building strategies to focus more on using connections and developing understanding, so that your KS2 pupils rely less on memorisation.

Phase

Primary KS2

Audience

Teaching Assistants
Class Teachers
Subject Leaders
NQTs
Returners to Teaching
Senior Leadership Team

Trainer

Guest: Craig Barton
Anna Hogg, Sarah Jay and Rose Keating

Date

23/11/2018
