Title: Glue Ear Training

Venue: Microsoft Teams

Trainer: Delyth Crook

Virtual School Sensory Support Service

Glue Ear Training

Do you work with a child that could be suffering from glue ear?

Outline

Glue ear affects up to 20% of pre-school and reception aged children at any one time, and up to 80% of all children before the age of 10 years. Glue ear usually resolves spontaneously within 3 months. However, 30-40% of children have recurrent episodes and 5-10% of episodes last for more than a year. During this time, and without appropriate awareness and support, glue ear can also have a significant impact on a child's language development and educational attainment. Some groups of children are known to be at risk of having long-term glue ear e.g. those born with a cleft palate or Down's syndrome.

Description

Virtual School Sensory Support are offering half a day's training to ensure staff have a basic understanding of glue ear, its prevalence and impact.

Outcome

Raise awareness about glue ear and impact on learning

Audience

This training welcomes SENDCOs, class and subject teachers and teaching assistants

Booking Information

Bookings should be made through Educator Solutions Website or by contacting Claire Hogston (ICT / Resources Assistant) on 01603 223499, or email sensorysupport@norfolk.gov.uk

Free to Norfolk candidates. Candidates external to Norfolk - £40
