

with Andrew Jeffrey and Liz Gibbs

This Work Group is free
of charge to all schools.

Angles Maths Hub is thrilled to announce its 2021/22 Primary-phase Research and Innovation Work Group.

Led by the nationally and internationally renowned Andrew Jeffrey and Liz Gibbs, Seeing Number at LKS2 aims to support teachers in further developing their subject knowledge, in using representation and structure, to support the teaching and learning of mental calculation in the LKS2 classroom.

This Work Group aims to move our LKS2 learners forwards in their understanding of number, after what has been a very turbulent KS1 journey through mathematics due to the Covid-19 pandemic.

Through this focussed professional development, teachers will be able to deepen pupils' knowledge, understanding and confidence, leading to success in their mathematical journey across KS2 and beyond.

This Work Group develops and deepens a Teaching for Mastery approach to mathematics teaching and learning, as well as aspects of Mastering Number, to support visualisation within the development of mental calculation skills, knowledge and understanding.

Work Group Timeline and Structure

Seeing Number at LKS2 will be offered as a blended Work Group model with sessions running face-to-face and online across the year. Whilst dates are imminently to be confirmed, face-to-face sessions will only take place in Spring and Summer terms, in line with guidance at that time.

To reserve your school's free place, complete our short application form [here](#).
