Kick start your 'Rocks and Soils' science topic with a half day, investigative programme at your school, lead by one of our qualified and experienced environmental teachers, which will leave your pupils engaged, motivated and keen to find out more!

Pupils work in groups to complete three hands-on activities: Unravelling the mystery of the stolen statue by identifying it from a fragment found at the scene of crime? Discovering all about soil invertebrates by using close observation skills and binocular microscopes. Testing soils to find the perfect places for planting in the school grounds... but what could they grow and where?

All three activities get the children using equipment which they may not have encountered before, helping bring the topic to life and enthuse them about real life science!

"The 'hands-on' approach was marvellous and really beneficial to all my pupils."

- Docking Primary School
